1 Overview

1.1 What is this software?

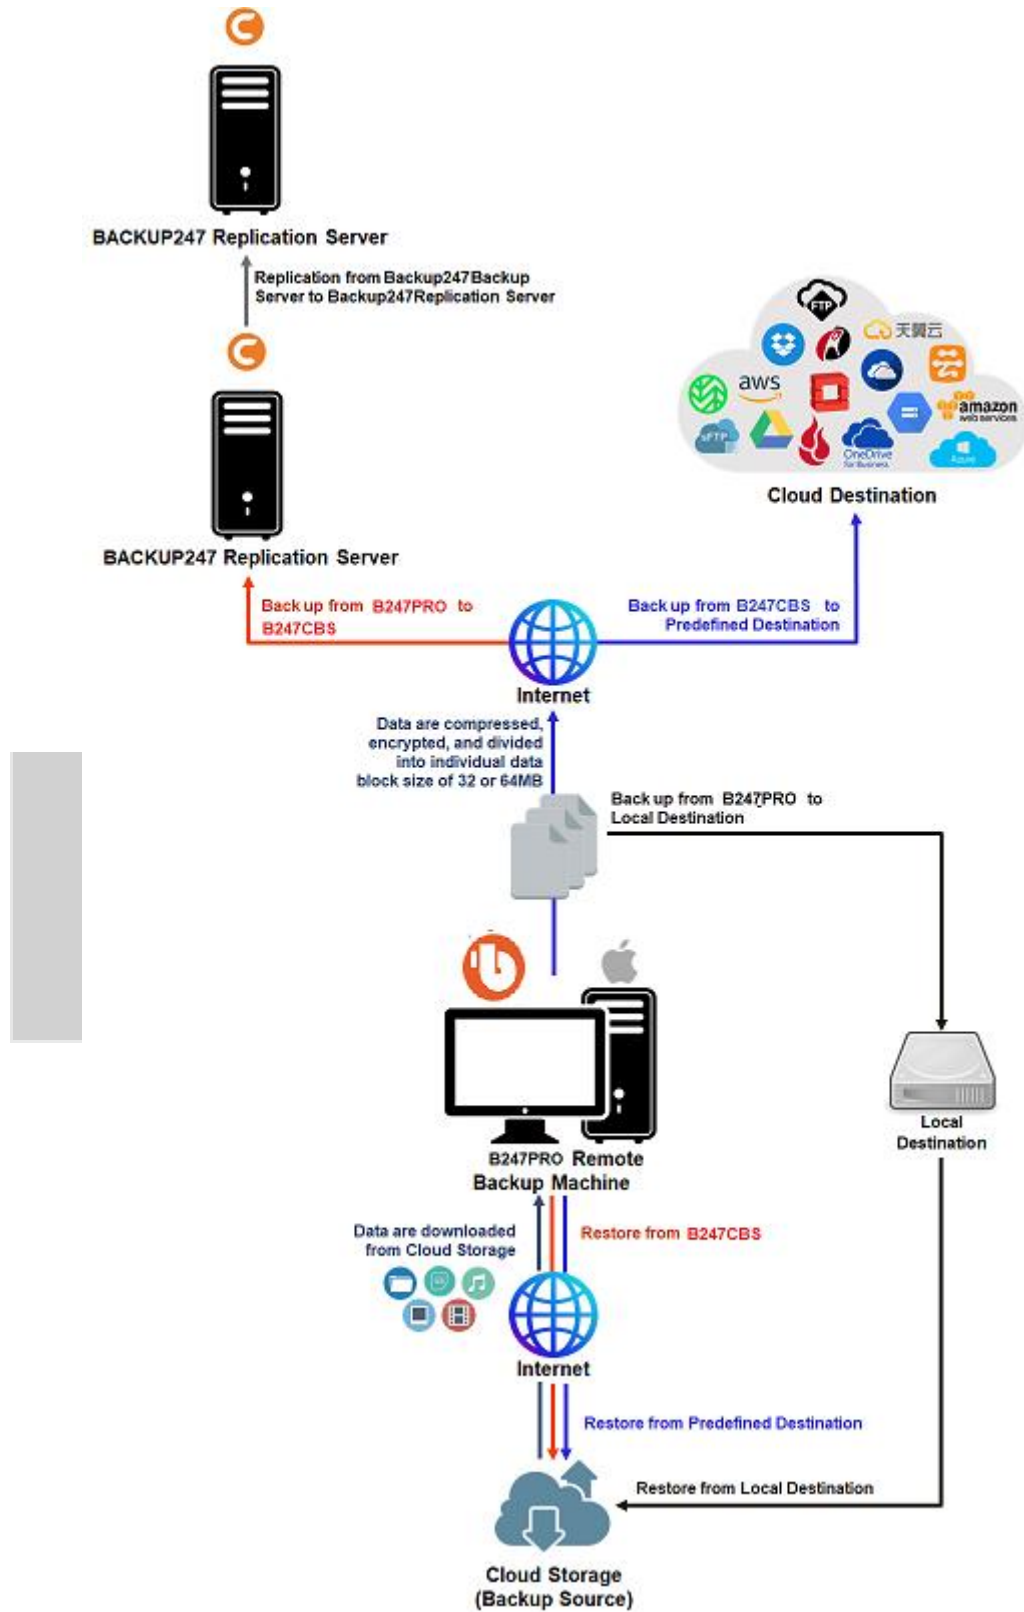

Backup247 brings you specialized client backup software, namely Backup247 Advanced Client (B247PRO), that allows you to back up your data stored on the cloud storage to either the B247CBS backup server, another cloud or predefined storage, and local destination. This provides set of tools that include backup and recovery of individual files with versioning and retention policy to protect your data on cloud storages.

1.2 System Architecture

For agent-based backup and restore, the Backup247 Advanced Client (B247PRO) initiates connection to the cloud storage (backup source) through the internet via the deployed backup agent on the customer's site.

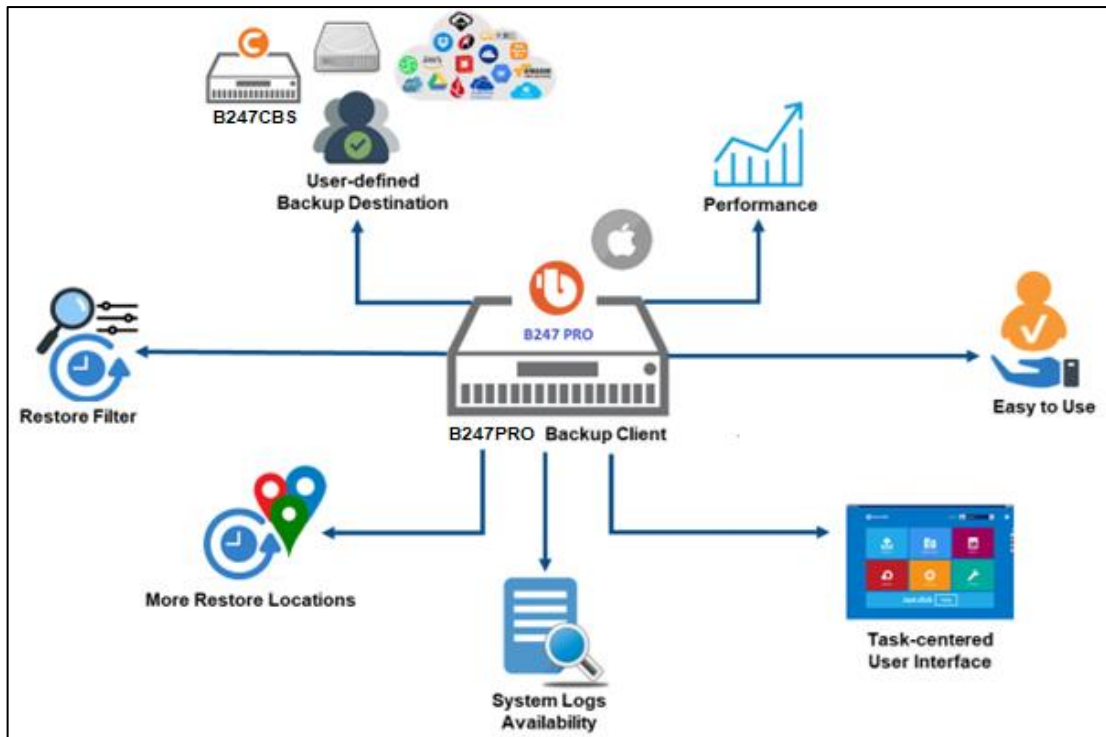

Below is the system architecture diagram illustrating the major elements involved in the backup and restore process using the Backup247 Advanced Client (B247PRO) Run on Client (Agent-based) backup configuration.

1.3 Why should I use Backup247 Advanced Client (B247PRO) (Agent-based) Solution to back up my cloud data?

We are committed to bringing you a comprehensive Run on Client (Agent-based) cloud backup and recovery solution with Backup247 Advanced Client (B247PRO). Below are some key areas that we can help to make your backup experience a better one.

User-defined Backup Destination

Backup users have more options in assigning a backup destination (i.e., B247CBS, Cloud or Predefined destinations, and standard and local destination).

Performance

Agent-based backup is performed on a physical machine or computer with resources that is dedicated for backup and restore operations. Once the backup client is deployed on the machine, users have more control on the hardware which affects the overall backup and restore performance.

Easy to Use

Agent-based backup solution has a traditional backup approach that is well understood by most administrators and end users who would only need minimal effort and time to understand the backup and/or restore operations.

Task-centered User Interface

Agent-based backup solution make it a good option for users to have more control on the individual backup/restore and resources management.

System Logs Availability

System logs for data integrity check and space freeing up results is accessible for the end users and can be reviewed anytime. Unlike with the agentless backup where system logs will only be available upon request from the backup service provider.

More Restore Locations

Agent-based backup offers you three (3) restore locations such as the local machine, original location (or the cloud storage where you backed up them), and alternate location (which is through the same cloud storage but on a different folder).

Restore Filter

Agent-based backup has a restore filter feature which allows users to easily search directories, files, and/or folders to restore.

High Level of Security

We understand that the data on your cloud storage may contain sensitive information that requires to be protected, that is why we ensure that your backup data will be encrypted with the highest level of security measure.

- **Un-hackable Encryption Key** – to provide the best protection to your backup data, the encryption feature which will default encrypt the backup data locally with an AES 256-bit randomized encryption key.
- **Encryption Key Recovery** – Furthermore, we have a backup plan for you to recover your encryption key in case you have lost it. Your backup service provider can make it mandatory for you to upload the encryption key to the centralized management console, the encryption key will be uploaded in hashed format and will only be used when you request for a recovery.

Cloud Destinations Backup

By default, the B247CBS is set as the storage destination in creating a cloud file backup set. However, you may add another storage destination(s) as provided by your backup service provider. Below is a list of supported cloud destinations:

	Aliyun		Microsoft Azure
	CTYun		Microsoft OneDrive
	Amazon S3		Microsoft OneDrive for Business
	AWS S3 Compatible Cloud Storage		Rackspace
	Wasabi		OpenStack
	Backblaze		Dropbox
	Google Cloud Storage		FTP
	Google Drive		SFTP

NOTE

For more details, please contact B247 Technical Support.

Run on Client

A Run on Client Cloud File Backup Set provides you with an agent-based backup solution. Manual, scheduled, or continuous backup job is performed on the client computer. A backup agent needs to be installed on the client machine in order to back up your data on cloud storage(s).

Differences between a Run on Client and Run on Server Backup Set

The following table summarizes the differences in backup options available between a Run on Client and Run on Server cloud file backup set, and the tool to use (client agent or web console) when performing a backup and restore:

Features/Functions	Run on Client Cloud File Backup Set	Run on Server Cloud File Backup Set
General Settings	✓	✓
Backup Source	✓	✓
Backup Schedule	24/7 ✓	✓
Continuous Backup	Backup247 Advanced Client (B247PRO) / Backup247 Standard Backup Suite (B247LITE) for Windows only	✓
Destination	B247CBS, Predefined Destinations, Standard and Local	B247CBS or Predefined Destinations only
Multiple Destinations	✓	✗
Deduplication	Backup247 Advanced Client (B247PRO)	Backup247 Advanced Client (B247PRO)
Retention Policy	✓	Backup247 Advanced Client (B247PRO)
Command Line Tool	Backup247 Advanced Client (B247PRO)	✗
Reminder	Backup247 Advanced Client (B247PRO) / Backup247 Standard Backup Suite (B247LITE) for Windows only	✗
Restore Filter	✓	✗
Bandwidth Control	✓	Backup247 Advanced Client (B247PRO)
IP Allowed for Restore	✓	✗
System Logs of Data Integrity Check and Space Freeing Up	✓	✗
Others	✓	✓
To Run a Backup	Backup247 Advanced Client (B247PRO) / Backup247 Standard Backup Suite (B247LITE)	B247CBS User Web Console only
To Run a Restore	Backup247 Advanced Client (B247PRO) / Backup247 Standard Backup Suite (B247LITE)	B247CBS User Web Console only

Aside from the backup options, the table below shows other operations that can be performed using client agent and web console:

Features/Functions	Run on Client Cloud File Backup Set	Run on Server Cloud File Backup Set
Data Integrity Check	✓	✓
Space Freeing Up	✓	✗
Delete Backup Data	✓	✓
Decrypt Backup Data	✓	✗

NOTE

For more details on the Run on Server backup option, please refer to the following guides:
B247CBS v9 User Guide – Cloud File Run on Server (Agentless) Backup and Restore Guide

1.4 About This Document 24/7

What is the purpose of this document?

This document aims at providing all necessary information for you to get started with setting up your system for Run on Client Cloud File backup and restore, followed by step-by-step instructions on a creating a backup set, running a backup and restoring backup data using the Backup247 Advanced Client (B247PRO) client.

The document can be divided into three (3) main parts.

Part 1: Preparing for Cloud File Backup & Restore

Requirements

Requirements on hardware & software installation

Best Practices and Recommendations

Items recommended to pay attention to before performing backup and restore

Part 2: Performing a Cloud File Backup

Logging in to Backup247 Advanced Client (Pro) client

Log in to Backup247 Advanced Client (Pro)

Creating a Backup Set

Create a backup set using Backup247 Advanced Client (Pro)

Running a Backup Set

Run a backup set using Backup247 Advanced Client (Pro)

Part 3: Restoring a Cloud File Backup

Restoring a Backup Set using Backup247 Advanced Client (Pro) client

Restore a backup set using Backup247 Advanced Client (Pro)

What should I expect from this document?

After reading through this documentation, you can expect to have sufficient knowledge to set up your system to backup data on Cloud storage using the client agent, as well as to carry out an end-to-end backup and restore process.

Who should read this document?

This documentation is intended for backup administrators and IT professionals who are responsible for the Cloud File backup and restore.

2 Preparing for Backup and Restore

2.1 Hardware Requirement

To achieve the optimal performance when running Backup247 Advanced Client (B247PRO) on your machine, refer to the following article for the list of hardware requirements.

[FAQ: Backup247 Hardware Requirement List \(HRL\) for version 9.1 or above](#)

2.2 Software Requirement

Refer to the following article for the list of compatible operating systems and application version.

[FAQ: Backup247 Software Compatibility List \(SCL\) for version 9.1 or above](#)

2.3 Internet / Network Connection

In order to allow access to the cloud storage, a stable internet connection must be available on the computer where the Backup247 Advanced Client (B247PRO) is installed. If large amounts of data are backed up from a cloud storage account, then a fast internet connection is required.

2.4 Backup247 Advanced Client (B247PRO) Installation

Make sure that Backup247 Advanced Client (B247PRO) is installed on a computer with Internet access for connection to the cloud storage.

2.5 Valid Backup247 Advanced Client (B247PRO) User Account

A valid Backup247 Advanced Client (B247PRO) user account is required before you can log in to the Backup247 Advanced Client (B247PRO) client.

2.6 Backup247 License Requirements

⦿ Licenses

The Cloud File Backup module is included in the basic Backup247 Advanced Client (B247PRO) license. There is no limit on the number of Cloud File backup sets in an Backup247 Advanced Client (B247PRO) user account.

For more details, please contact your backup service provider.

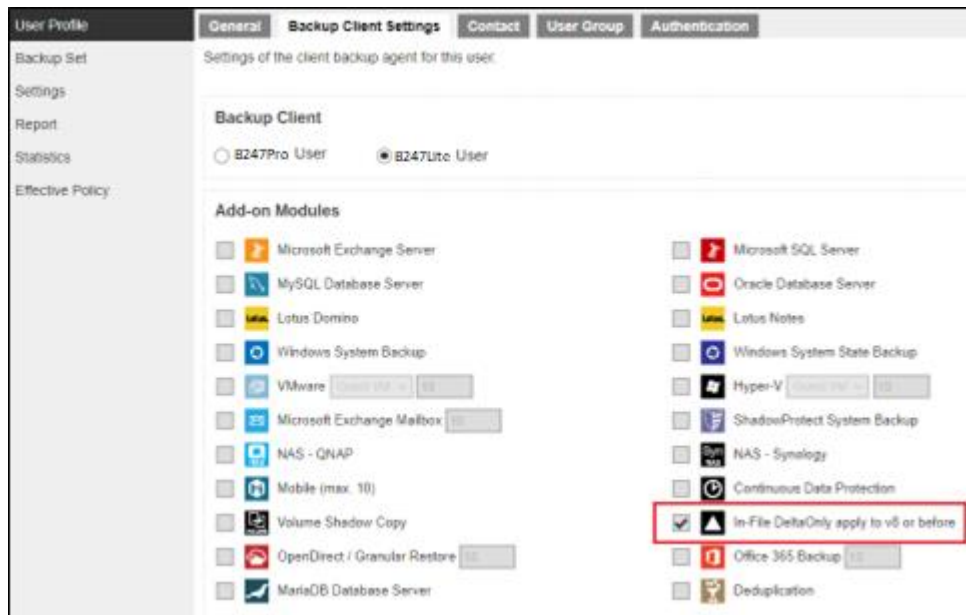

2.7 Add-on Module Requirements

⦿ In-File Delta

The In-File Delta add-on module must be added on the Backup247 Advanced Client (B247PRO) user account if you would like to use this feature. This only applies to backup sets created using Backup247 Advanced Client (B247PRO) v8 or before.

NOTE

This add-on module must be enabled on the Backup247 Advanced Client (B247PRO) user account. Please contact your backup service provider for details.

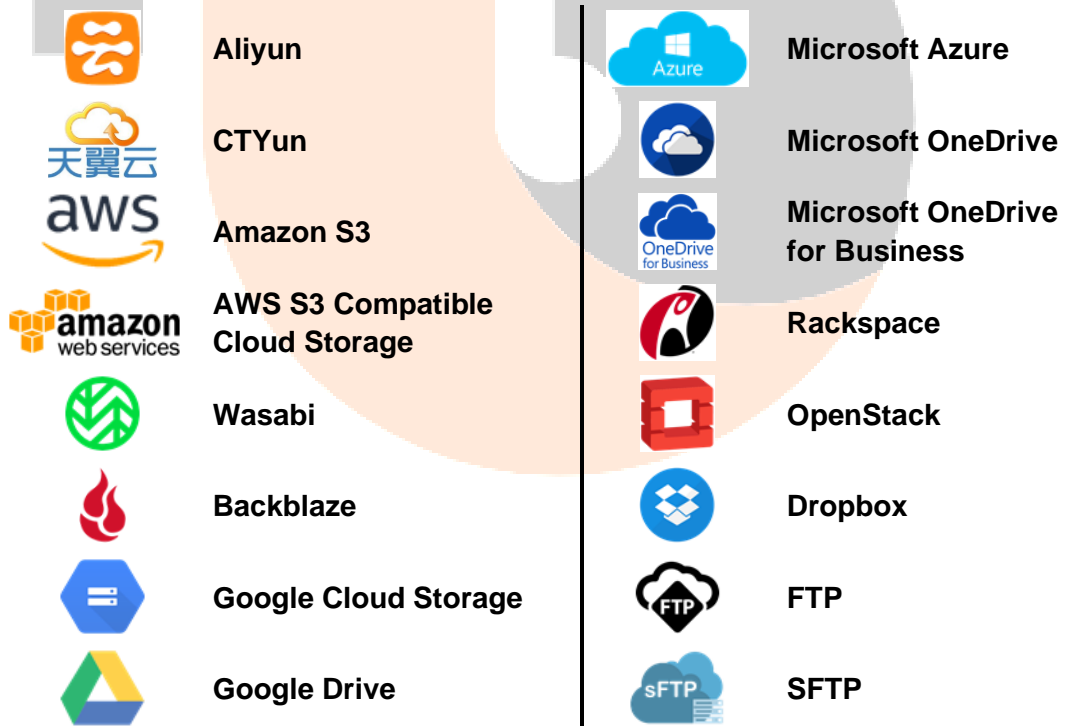

2.8 Backup Quota Requirement

Make sure that your Backup247 Advanced Client (B247PRO) user account has sufficient quota assigned to accommodate the storage for the cloud file backup set(s) and retention policy.

2.9 Cloud Sources

The Backup247 Advanced Client (B247PRO) Run on Client (Agent-based) Backup Solution supports the following cloud sources to back up as provided by your backup service provider:

2.10 Login Credentials to Cloud Storage

To allow access to the cloud storage (backup source) in performing a backup, make sure to have the correct login credentials to the cloud storage service.

2.11 Network Bandwidth

10 Mbps or above connection speed.

2.12 Best Practices and Recommendations

The following are some best practices and recommendations we strongly recommend you follow for optimized backup and restore performance:

• Backup Destination

To provide maximum data protection and flexible restore options for agent-based backup, it is recommended to configure:

- At least one offsite or cloud destination
- At least one local destination for fast recovery

• Temporary Directory Folder Location

Temporary directory folder is used by the Backup247 Advanced Client (B247PRO) for storing backup set index files and any incremental or differential backup files generated during a backup job. To ensure optimal backup/restoration performance, it is recommended that the temporary directory folder is set to a local drive.

• Performance Recommendations

Schedule backup jobs when system activity is low to achieve the best possible performance.

• Bucket Management for Enterprise Cloud Storage Providers

If you have chosen to back up files from an enterprise cloud storage (e.g., Amazon S3, Wasabi, Microsoft Azure, Google Cloud Storage, etc.), you will have to select a bucket name during the creation of cloud file backup set. Each bucket has a single compartment, and an access key is associated with a single bucket. Therefore, each backup set can back up one bucket.

For account with multiple buckets, the backup should be organized into one bucket per backup set. For best practice, make sure to assign one bucket name per backup set so you can ensure that you are selecting the correct file(s) to back up.

• Test Restore Operations

Perform test restores periodically to ensure your backup is setup and backed up properly. Performing recovery test can also help identify potential issues or gaps in your recovery plan. It is important that you do not try to make the test easier, as the objective of a successful test is not to demonstrate that everything is flawless, but to discover faults in your recovery plan. There might be flaws identified in the plan throughout the test and it is important to identify those flaws.

⦿ **Periodic Backup Schedule**

The periodic backup schedule should be reviewed regularly to ensure that the interval is sufficient to handle the data volume on the machine. Over time, data usage pattern may change on a Cloud storage account, i.e., the number of new files created, the number of files which are updated/deleted, and new users may be added etc.

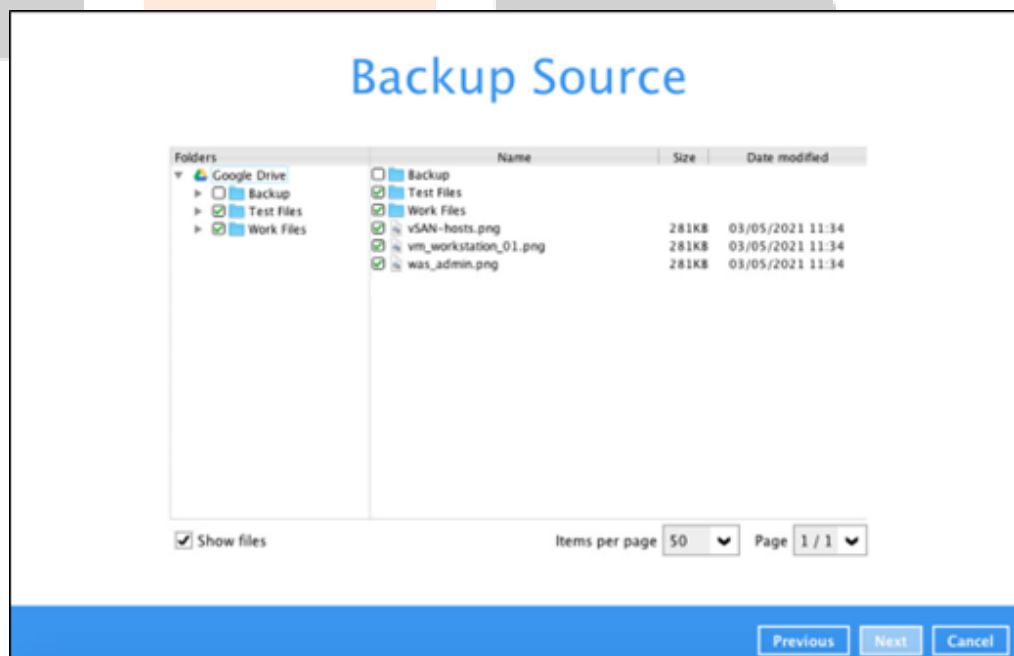

Consider the following key points to efficiently handle backup sets with periodic backup schedule.

- ⦿ Hardware – to achieve optimal performance, compatible hardware requirements is a must. Ensure you have the backup machine’s appropriate hardware specifications to accommodate frequency of backups,
 - so that the data is always backed up within the periodic backup interval
 - so that the backup frequency does not affect the performance of the production server
- ⦿ Retention Policy - also make sure to consider the retention policy settings and retention area storage management which can grow because of the changes in the backup data for each backup job.

2.13 Limitations

For backup source selection:

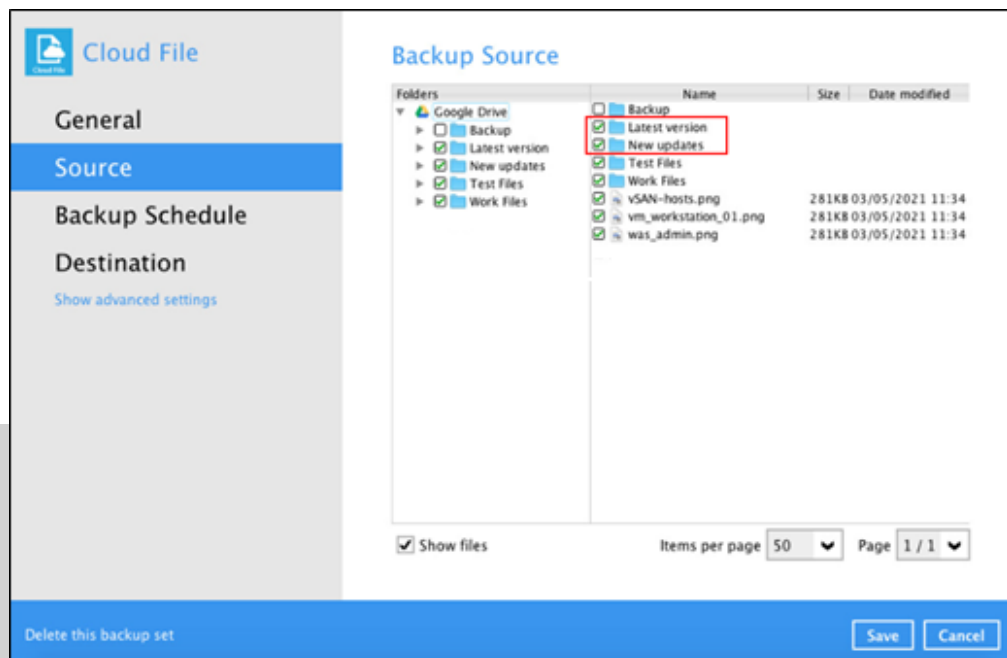

1. It is currently not possible to select the entire contents of the Cloud drive. Existing top-level folders and/or files must be selected individually. If you need to back up the contents of the entire Cloud drive, then all top-level folders and/or files must be selected.

- If there are any top-level folders and/or files added to the Cloud drive after the backup set is created, they will not be added in the backup source automatically. The backup set will have to be manually updated to include the new top-level folders and/or files before they can be backed up.

Example:

If the “Latest version” and “New updates” folders were created after the creation of the backup set, and the contents of these folders must be backed up, then you must manually select these folders to be included in the backup.

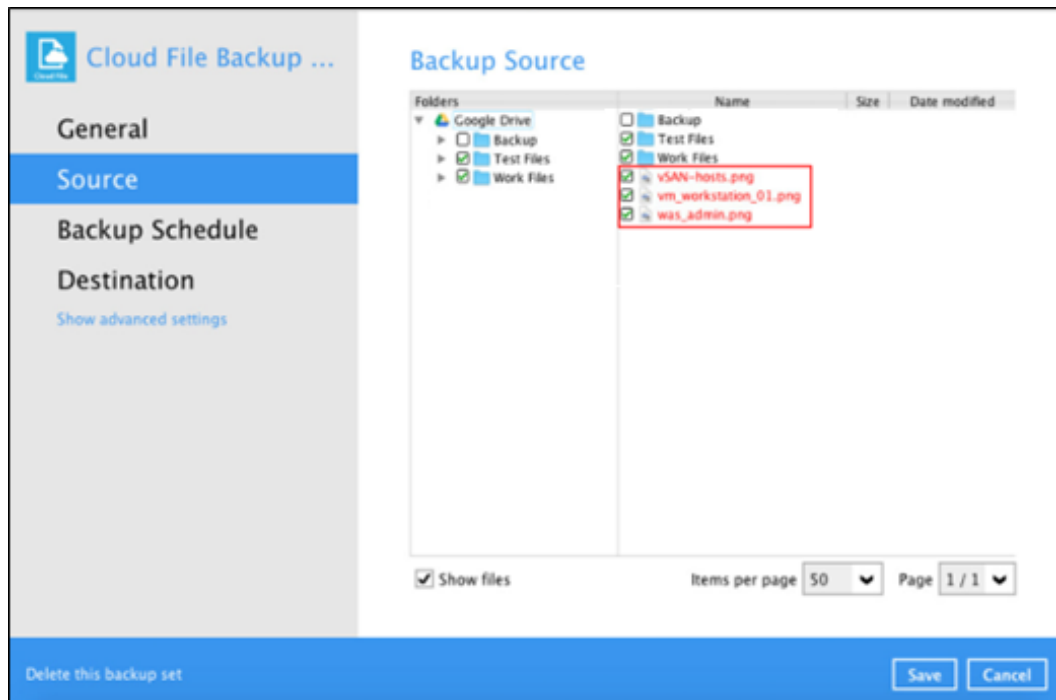

- If there are any top-level folders and/or files which have been deleted from the Cloud drive since the last backup job, they will not be removed from the backup source automatically. The backup set will have to be manually updated to unselect the deleted top-level folders and/or files. Otherwise, the backup job will be completed with warnings.

Example:

The following files were backed up but subsequently deleted from the top-level backup source of the Cloud drive: **was_admin.png**, **vm_workstation_01.png**, **vSAN-hosts.png**. The next backup job will encounter the following warnings until these deleted files are unselected from the backup source.

The deleted files are highlighted in red on the backup source to indicate that they no longer exist on the Cloud storage account.

Backup log

```

3 Creating a Cloud File Backup Set

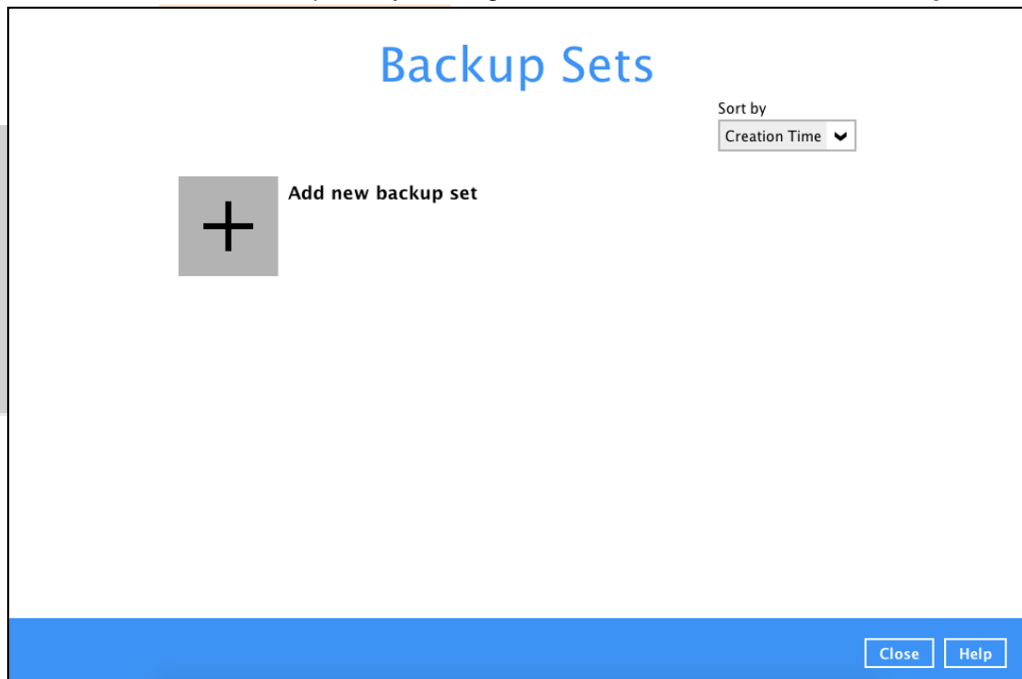

1. Log in to Backup247 Advanced Client (B247PRO).

For instructions on how to do this please refer to Chapter 7 of the Backup247 Advanced Client (B247PRO) v9 Quick Start Guide for Mac.

2. In the Backup247 Advanced Client (B247PRO) main interface, click **Backup Sets**.

3. Create a Cloud File backup set by clicking the "+" icon next to **Add new backup set**.

4. Enter a **Name** for your backup set and select **Cloud File Backup** as the **Backup set type**.

Create Backup Set

Name
Client Run Cloud File Backup

New Backup Schedule

Name

Type

Backup on the following day once

Start backup at
 :

Stop

Run Retention Policy after backup

- **Start backup** – the start time of the backup job.
 - **at** – this option will start a backup job at a specific time.
 - **every** – this option will start a backup job in intervals of minutes or hours.

Here is an example of backup set that has a daily and weekly backup schedule.

Figure 1.1

Figure 1.1 – Periodic scheduled every 4 hours Monday - Friday for business hours

Figure 1.2

Figure 1.2 – Normal schedule run at 21:00 or 9:00 PM daily on Saturday & Sunday for weekend non-business hours

- **Stop** – the stop **time** of the backup job. This only applies to schedules with start backup “at” and is not supported for periodic backup schedule (start backup “every”)
 - **until full backup completed** – this option will stop a backup job once it is complete. This is the configured stop time of the backup job by default.
 - **after (defined no. of hrs.)** – this option will stop a backup job after a certain number of hours regardless of whether the backup job has completed or not. This can range from 1 to 24 hrs.

The number of hours must be enough to complete a backup of all files in the backup set. For small files in a backup, if the number of hours is not enough to back up all files, then the outstanding files will be backed up in the next backup job. However, if the backup set contains large files, this may result in partially backed up files.

For example, if a backup has 100GB file size which will take approximately 15 hours to complete on your environment, but you set the “stop” after 10 hours, the file will be partially backed up and cannot be restored. The next backup will upload the files from scratch again.

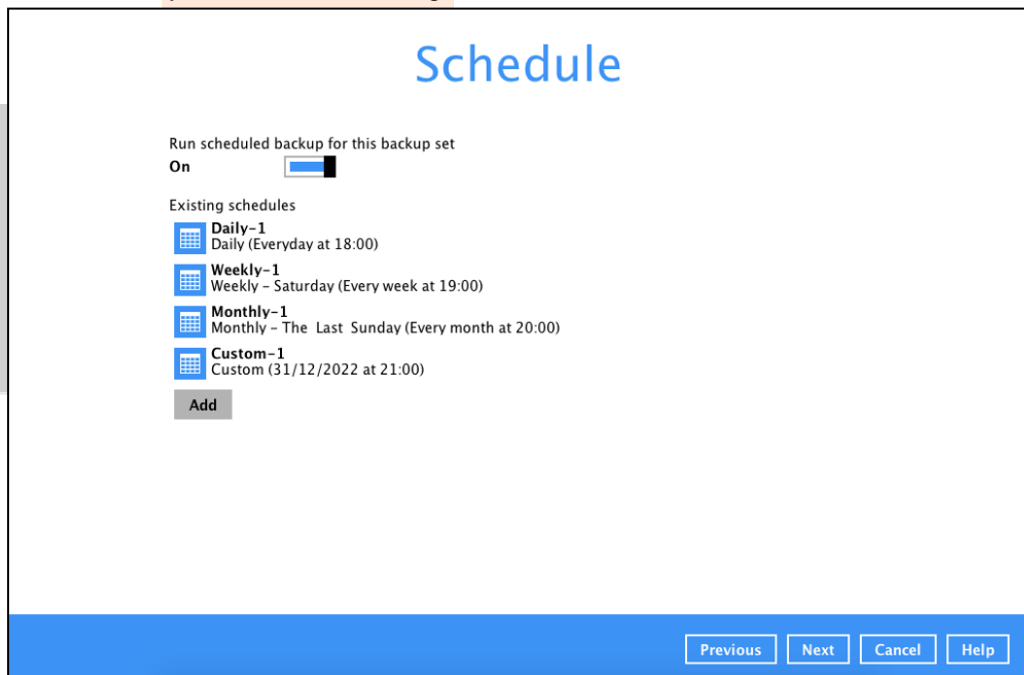

The partially backed up data will have to be removed by running the data integrity check.

As a general rule, it is recommended to review this setting regularly as the data size on the backup machine may grow over time.

- **Run Retention Policy after backup** – if enabled, the Backup247 Advanced Client (B247PRO) will run a retention policy job to remove files from the backup destination(s) which have exceeded the retention policy after performing a backup job.

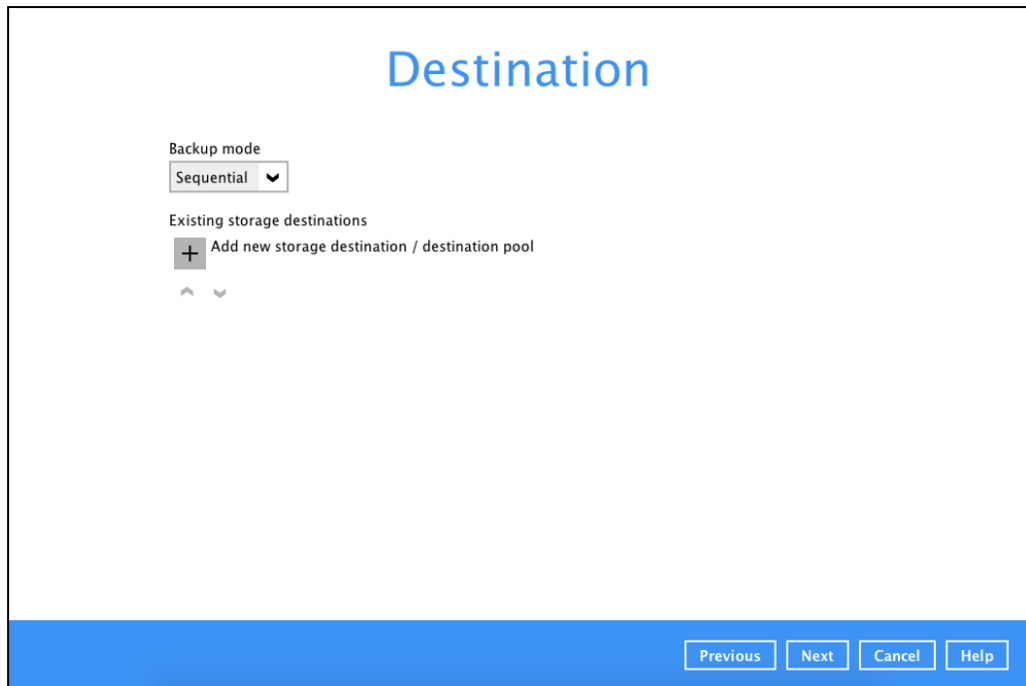

Click the **OK** button to save the configured backup schedule settings.

Multiple backup schedules can be created, as an example; the four types of backup schedules may look like the following.

Click **Next** to proceed.

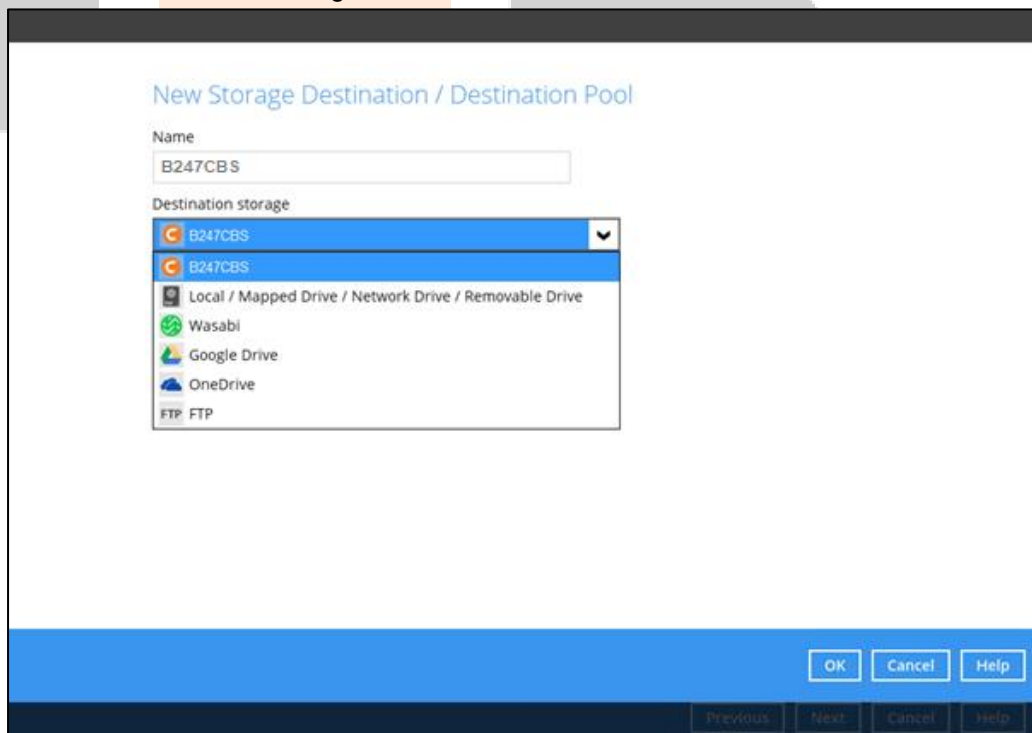

10. In the **Destination** menu, select a backup destination where the backup data will be stored. Click the “+” icon next to **Add new storage destination / destination pool**.

NOTE

For more details on Backup Destination, refer to this article:
FAQ: Frequently Asked Questions on Backup Destination

11. Select the Destination storage.

You can choose a storage combination of Local/Mapped drive/Removable Drive, Cloud storage or FTP. Click **OK** to proceed when you are done with the settings.

- If you have chosen the Local/Mapped Drive/Removable Drive option, click **Change** to browse to a directory path where backup data will be stored, then click **Test** to validate the path. **Test completed successfully** shows when the validation is done.

The screenshot shows a dialog box titled "New Storage Destination / Destination Pool". It contains the following fields and controls:

- Name:** A text input field containing "Local-1".
- Destination storage:** A dropdown menu with "Local / Mapped Drive / Removable Drive" selected.
- Local path:** A text input field that is currently empty, with a "Change" button to its right.
- Test:** A button located below the local path field.
- Footer:** A blue bar at the bottom containing "OK", "Cancel", and "Help" buttons. Below this bar, "Previous", "Next", "Cancel", and "Help" buttons are visible in a lighter blue bar.

- If you have chosen the Cloud Storage, click **Test** to log in to the corresponding cloud storage service.

The screenshot shows a dialog box titled "New Storage Destination / Destination Pool". It contains the following fields and controls:

- Name:** A text input field containing "GoogleDrive-1".
- Destination storage:** A dropdown menu with "Google Drive" selected.
- Test:** A button located below the destination storage dropdown.
- Link:** A blue link labeled "Sign up for Google Drive" is positioned below the "Test" button.
- Footer:** A blue bar at the bottom containing "OK", "Cancel", and "Help" buttons. Below this bar, "Previous", "Next", "Cancel", and "Help" buttons are visible in a lighter blue bar.

- If you have chosen the FTP as the destination, enter the the Host, Username and Password details.

12. You can add multiple storage destinations. The backup data will be uploaded to all the destinations you have selected in the order you added them. Press the   icon to alter the order. Click **Next** to proceed when you are done with the selection.

13. In the Encryption window, the default **Encrypt Backup Data** option is enabled with an encryption key preset by the system which provides the most secure protection.

Encryption

Encrypt Backup Data
 On

Encryption Type
 Default ▼
 Default
 User password

Click **Next** when you are done setting.

14. If you have enabled the Encryption Key feature in the previous step, the following pop-up window shows, no matter which encryption type you have selected.

The pop-up window has the following three options to choose from:

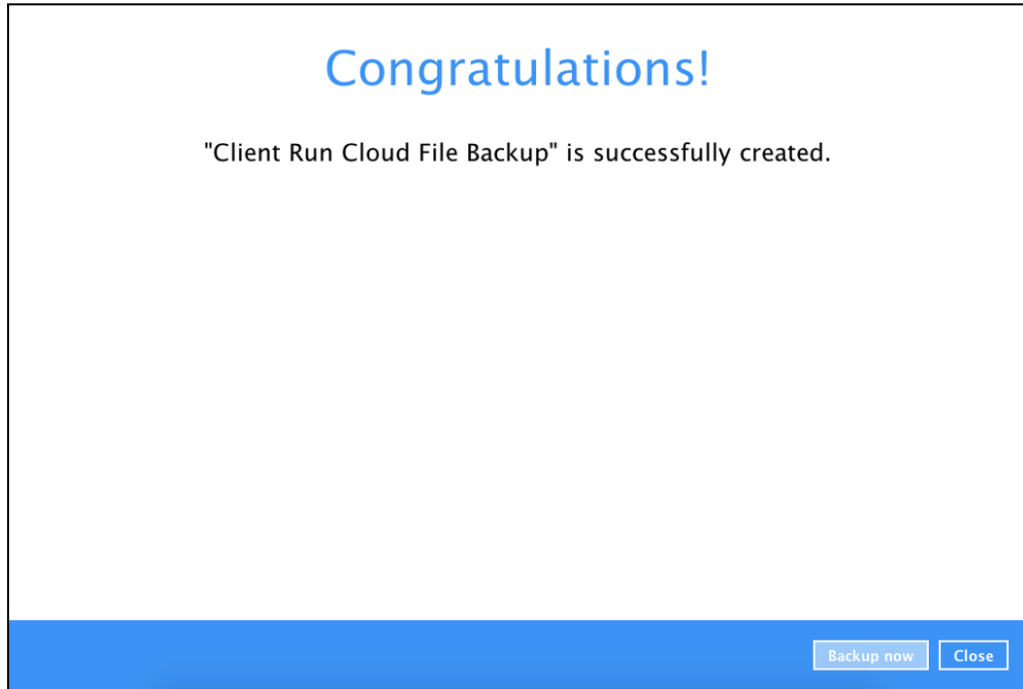

- **Unmask encryption key** – The encryption key is masked by default. Click this option to show the encryption key.

- **Copy to clipboard** – Click to copy the encryption key, then you can paste it in another location of your choice.
- **Confirm** – Click to exit this pop-up window and proceed to the next step.

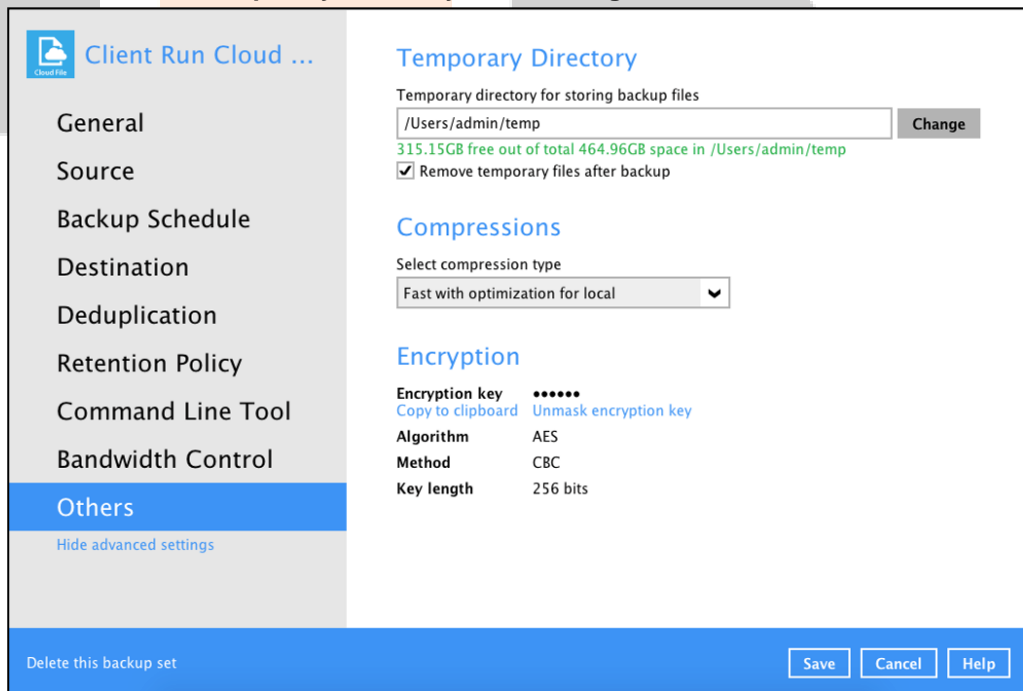

Click **Next** to create the backup set.

15. The following screen is displayed when the Cloud File backup set is created successfully

16. Based on Best Practices and Recommendations, it is highly recommended to change the **Temporary Directory**. Select another location with sufficient free disk space other than /Users/admin/temp.

Go to **Others > Temporary Directory**. Click **Change** to browse for another location.

17. Optional: Select your preferred **Compression** type. By default, the compression is Fast with optimization for local.

Go to Others > Compressions. Select from the following list:

- No Compression
- Normal
- Fast (Compressed size larger than normal)
- Fast with optimization for local

The screenshot shows the 'Client Run Cloud ...' interface. On the left is a navigation menu with the following items: General, Source, Backup Schedule, Destination, Deduplication, Retention Policy, Command Line Tool, Bandwidth Control, and Others (highlighted in blue). Below the menu is a 'Hide advanced settings' link. The main area is titled 'Temporary Directory' and contains a text input field with the path '/Users/admin/temp' and a 'Change' button. Below this, it shows '315.15GB free out of total 464.96GB space in /Users/admin/temp' and a checked checkbox for 'Remove temporary files after backup'. The 'Compressions' section has a dropdown menu open, showing the following options: 'Fast with optimization for local' (selected), 'No Compression', 'Normal', and 'Fast (Compressed size larger than normal)'. Below the dropdown, the following settings are listed: Algorithm: AES, Method: CBC, and Key length: 256 bits. At the bottom of the window, there is a blue bar with the text 'Delete this backup set' and three buttons: 'Save', 'Cancel', and 'Help'.

4 Running a Backup

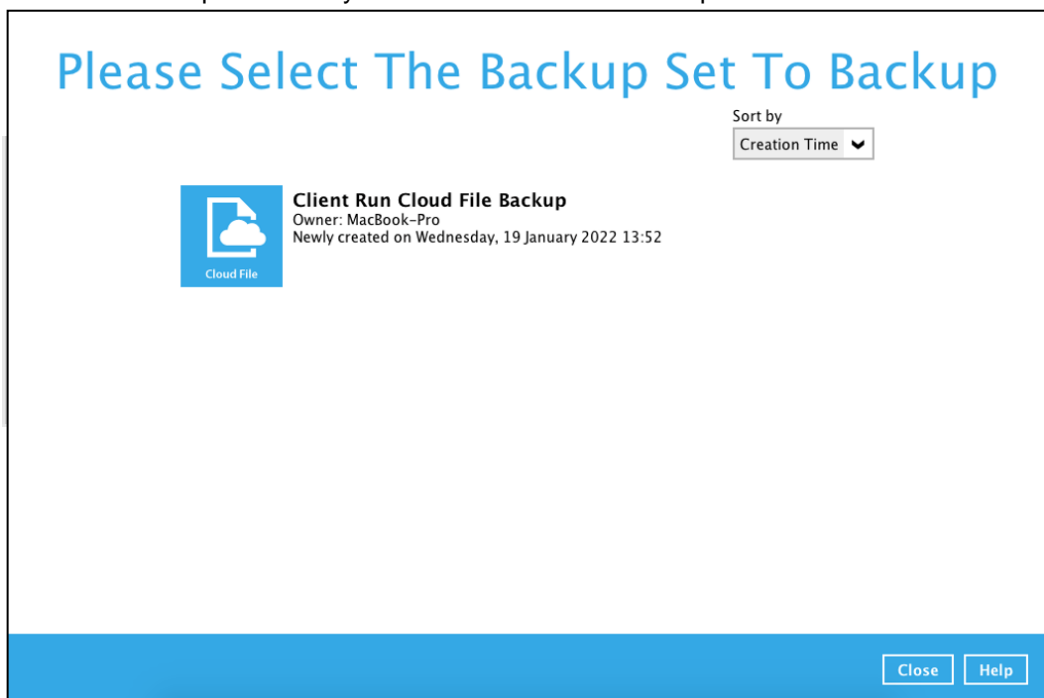

For an overview of the backup process, please refer to Chapter 11 in the Backup247 Advanced Client (B247PRO) v9 Quick Start Guide for Mac.

To start a backup, follow the steps below:

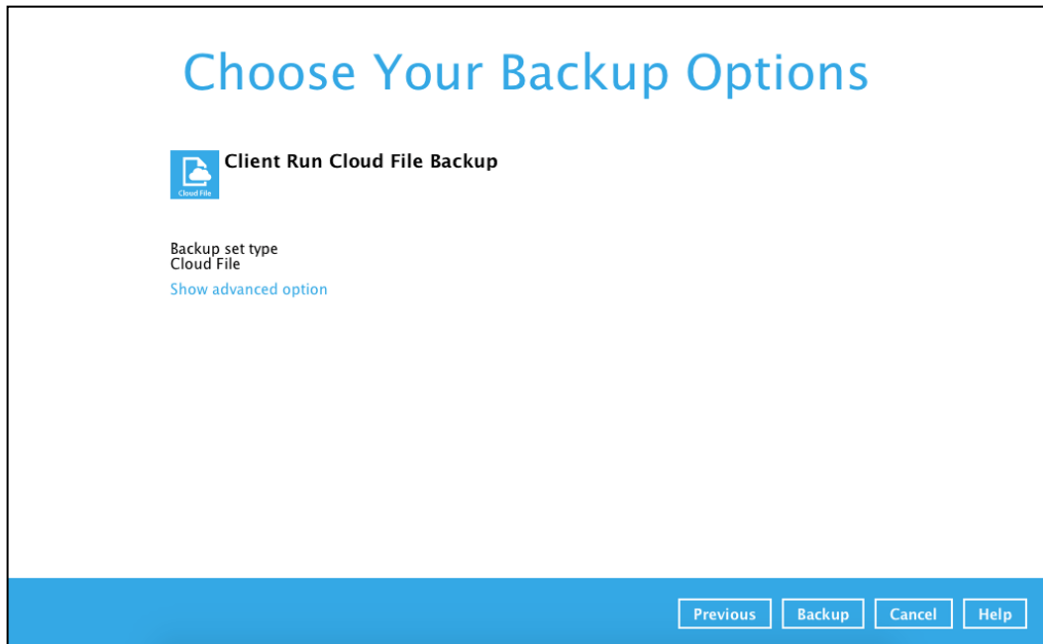

1. Click the **Backup** icon on the main interface of Backup247 Advanced Client (B247PRO).

2. Select the backup set which you would like to start a backup.

3. If you would like to modify the Destinations, Migrate Data and Retention Policy settings, click **Show advanced option**.

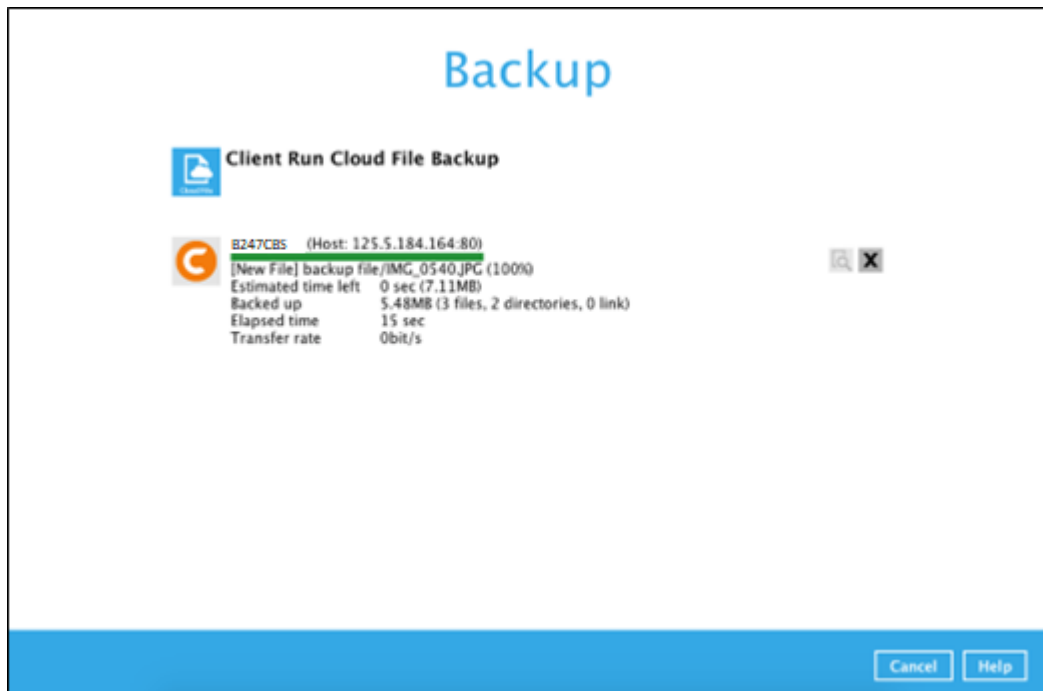

4. When advanced options are shown, it is recommended that you tick the checkbox next to **Run Retention Policy after backup** in the Retention Policy section at the bottom. This will help you save hard disk quota in the long run.

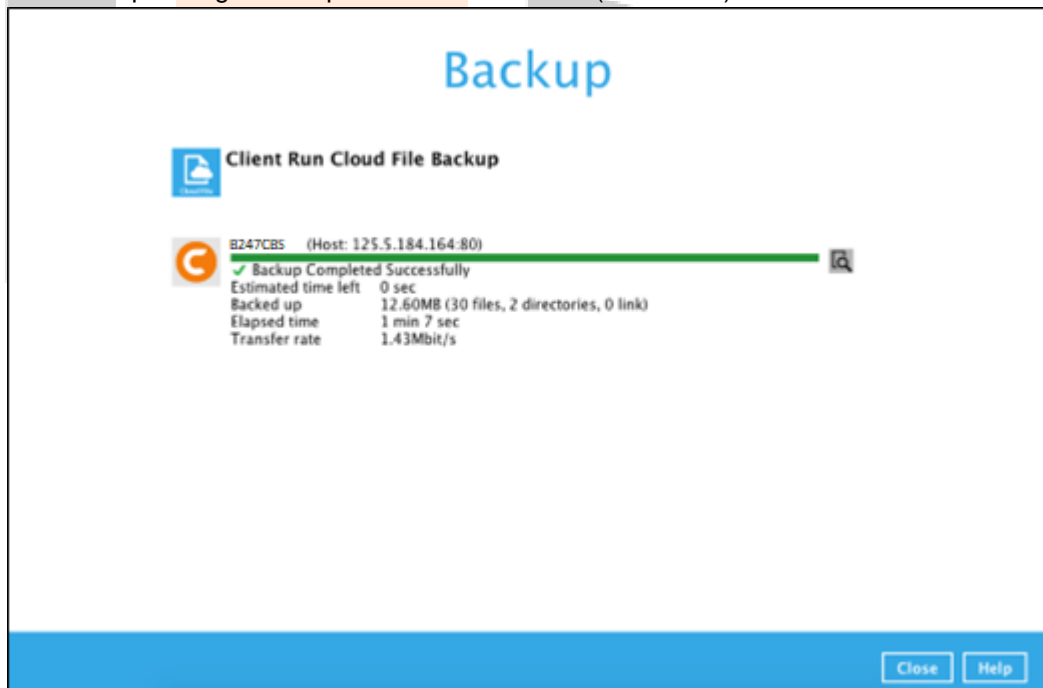

NOTE

The Migrate Data option will only be displayed if Deduplication is enabled for the backup set. When the Migrate Data option is enabled, the existing data will be migrated to the latest version during a backup job. Backup job(s) for backup sets with Migrate Data enabled may take longer to finish. For more information about this feature, refer to [B247CBS v9 New Features Supplemental document](#).

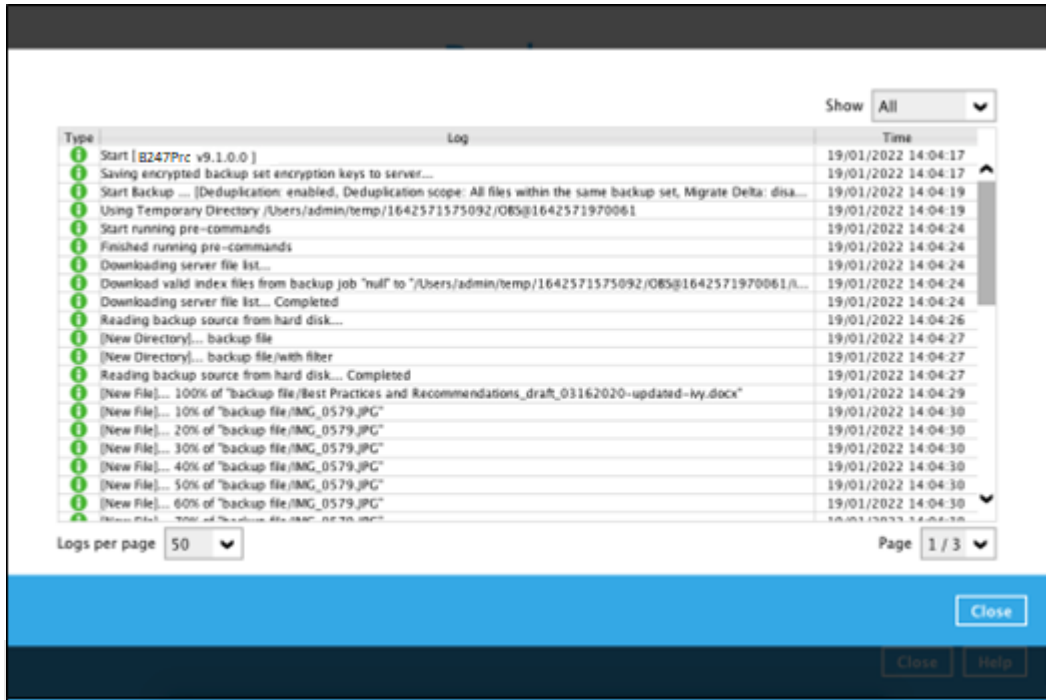

5. Click **Backup** to start the backup and wait until it is finished.

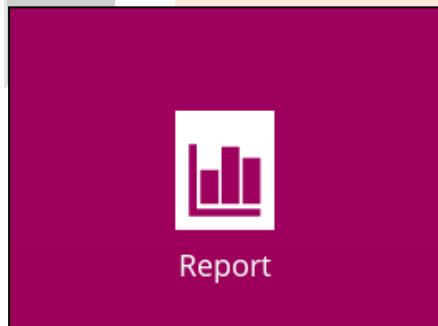

6. The backup through Backup247 Advanced Client (B247PRO) has been successful.

7. Check the log of your backup by clicking this icon  . It will show you the log of your backup with corresponding date and time.

To view the backup report, return to the Backup247 Advanced Client (B247PRO) main interface then click the following icon.

In this Backup Report screen, you can see the backup set with corresponding destination, completion date and time, and status.

5 Restoring with a Cloud File Backup Set

Using Backup247 Advanced Client (B247PRO) to do the restoration has three (3) options. Through Local machine, Original location, and Alternate location. Below are brief descriptions of the said features. After this quick walkthrough you will see the step-by-step instructions with corresponding screen shots on how to restore your data using the following options below.

- **Local machine**
Restore your data to your local computer where the Backup247 Advanced Client (B247PRO) is running.
- **Original location**
Aside from the location machine option, you are also able to restore your data to your original location, on the cloud storage, where they are originally saved.
- **Alternate location**
Besides the two options above, you can also restore your data to an alternate location on the same cloud storage but on a different folder.

NOTE

Log in to Backup247 Advanced Client (B247PRO). For instructions on how to do this please refer to [Chapter 7](#) of the Backup247 Advanced Client (B247PRO) v9 Quick Start Guide for Mac.

1. Click the **Restore** icon on the main interface of Backup247 Advanced Client (B247PRO).

2. Select the backup set that you would like to restore from.

Please Select The Backup Set To Restore

Sort by
Creation Time ▾

Client Run Cloud File Backup
Owner: MacBook-Pro
Last Backup: Wednesday, 19 January 2022 14:04

Cloud File

Close Help

3. Select the backup destination that contains the data that you would like to restore.

Select From Where To Restore

Client Run Cloud File Backup

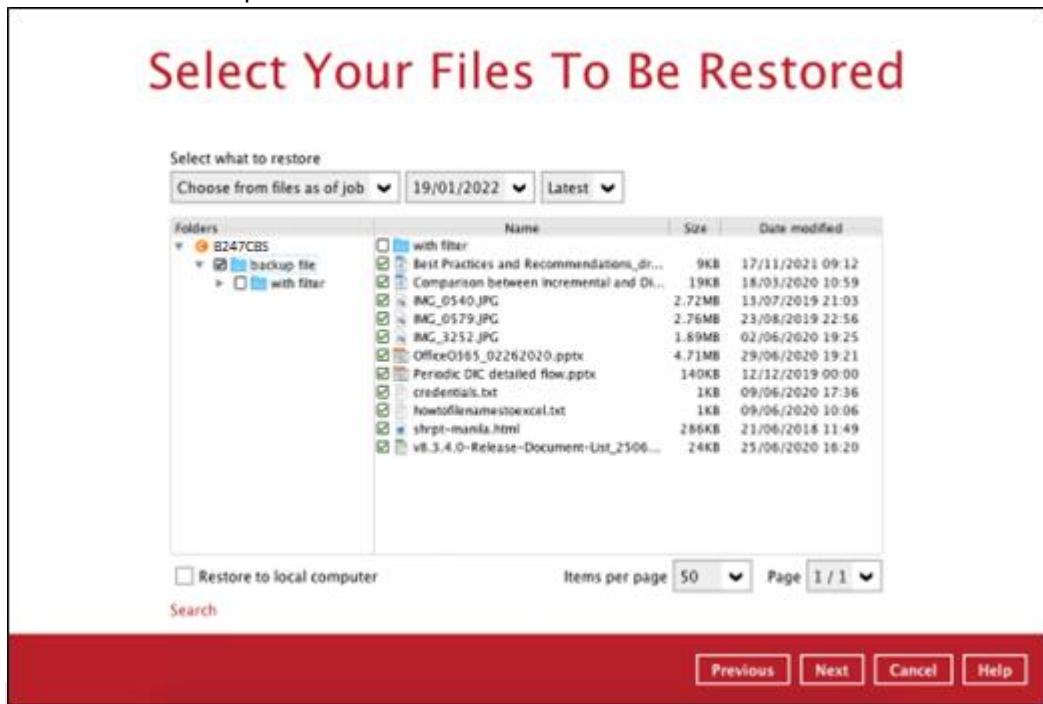

B247CBS
Host: 125.5.184.164:80

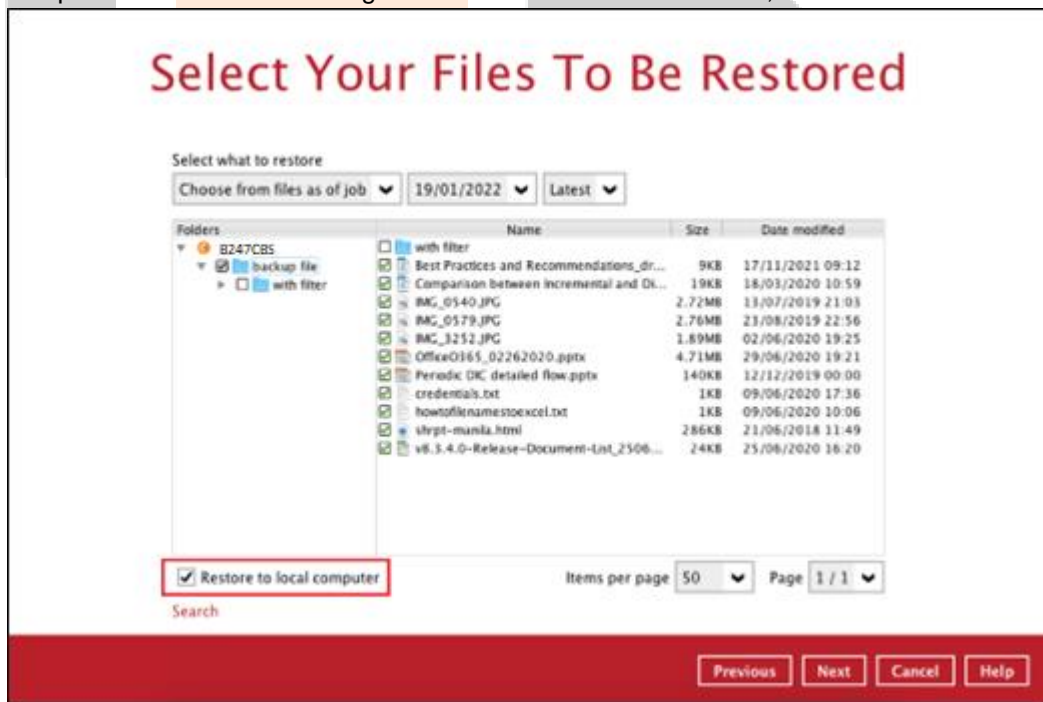

Local-1
/Users/admin/Documents/Backup

Previous Cancel Help

- Select to restore from a specific backup job, or the latest job available from the **Select what to restore** drop down menu.

Tick **Restore to local computer** if you want to restore the backed-up data to the local computer. Once done selecting the files and/or folders to restore, click **Next** to continue.

If you want to search for directories, files and folders to be restored, click **Search** to use the restore filter.

For more information on how to use the restore filter please refer to Chapter 13.3 of the Backup247 Advanced Client (B247PRO) v9 Quick Start Guide for Mac.

- The window that will be displayed will depend on the restore destination selected. Here are the three options:

- **Local computer**

If you want to restore on your local computer, browse to the corresponding directory path on the local computer that you want the data to be restored to.

Choose Where The Files To Be Restored

Restore files to
/Users/admin/Documents/Restore

Show advanced option

Previous Next Cancel Help

Click **Show advanced option** to configure other restore settings.

Choose Where The Files To Be Restored

Restore files to
/Users/admin/Documents/Restore

Verify checksum of in-file delta files during restore

Hide advanced option

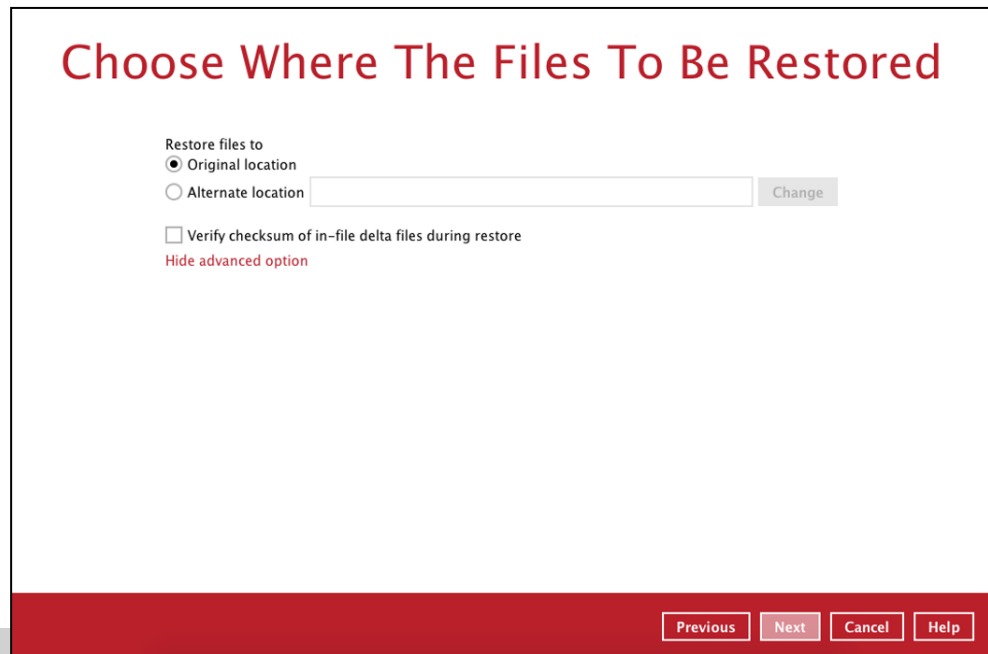

Previous Next Cancel Help

Verify checksum of in-file delta files during restore

By enabling this option, the checksum of in-file delta files will be verified during the restore process. This will check the data for errors during the restore process and create a data summary of the in-file delta files which will be included in the report.

- **Original location**

If you have chosen this option, the backup data will be restored to the original location on the cloud storage.

Choose Where The Files To Be Restored

Restore files to

Original location

Alternate location [Change](#)

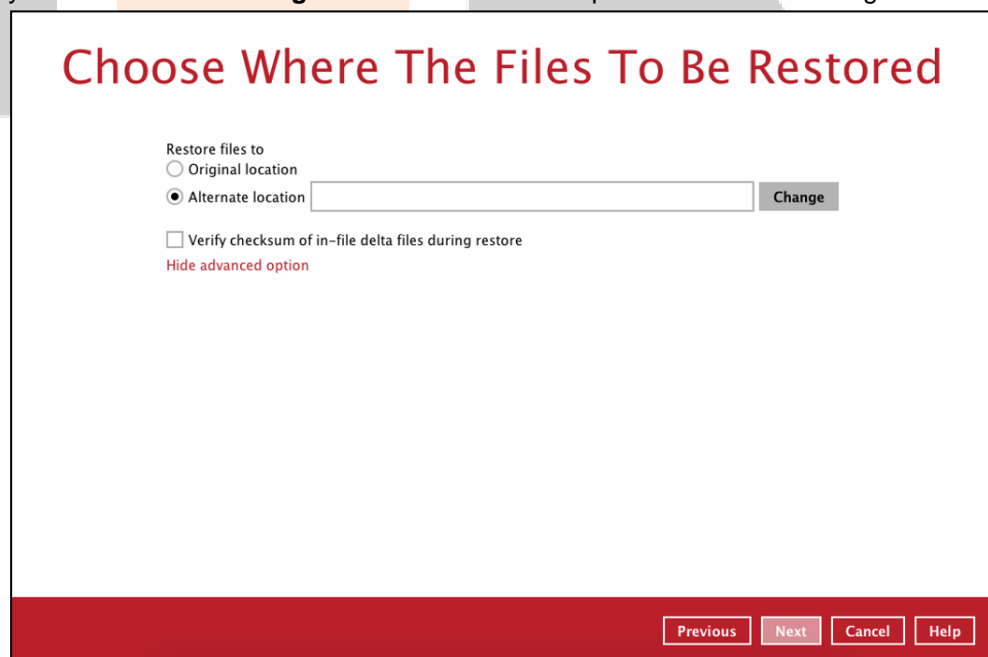

Verify checksum of in-file delta files during restore

[Hide advanced option](#)

[Previous](#) [Next](#) [Cancel](#) [Help](#)

- **Alternate location**

If you have chosen this option, backup data will be restored to another location of your choice. Click **Change** to select the alternate path on the cloud storage.

Choose Where The Files To Be Restored

Restore files to

Original location

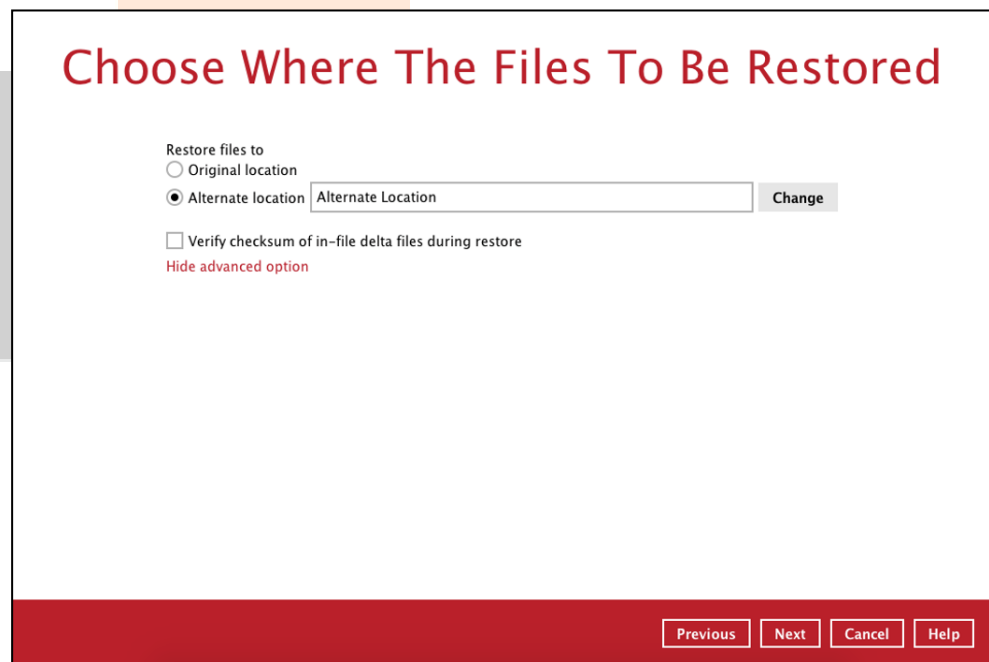

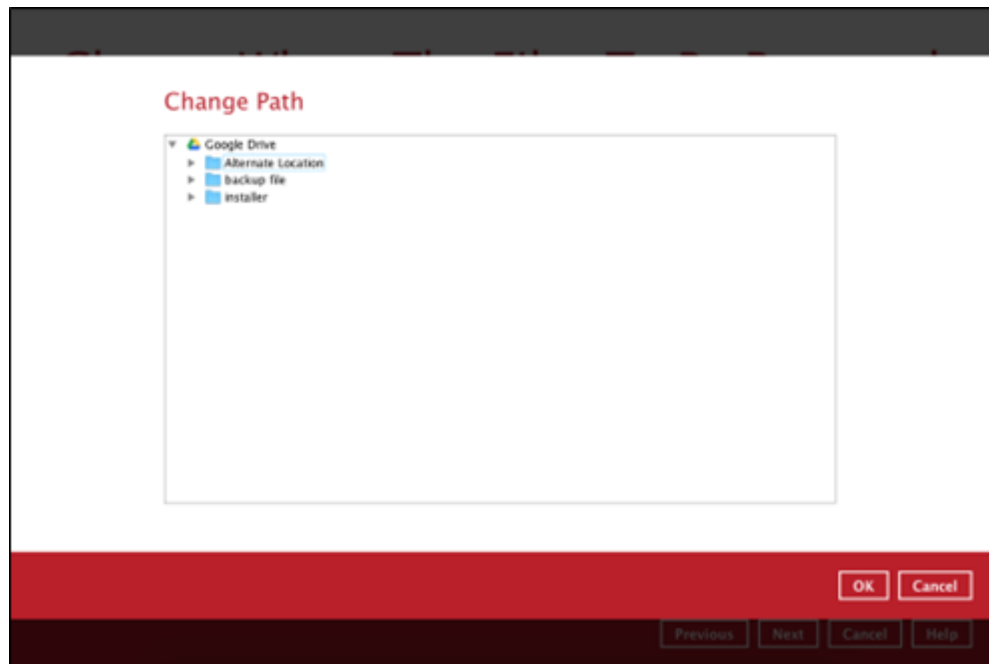

Alternate location [Change](#)

Verify checksum of in-file delta files during restore

[Hide advanced option](#)

[Previous](#) [Next](#) [Cancel](#) [Help](#)

Select the path where the data will be restored then click **OK**.

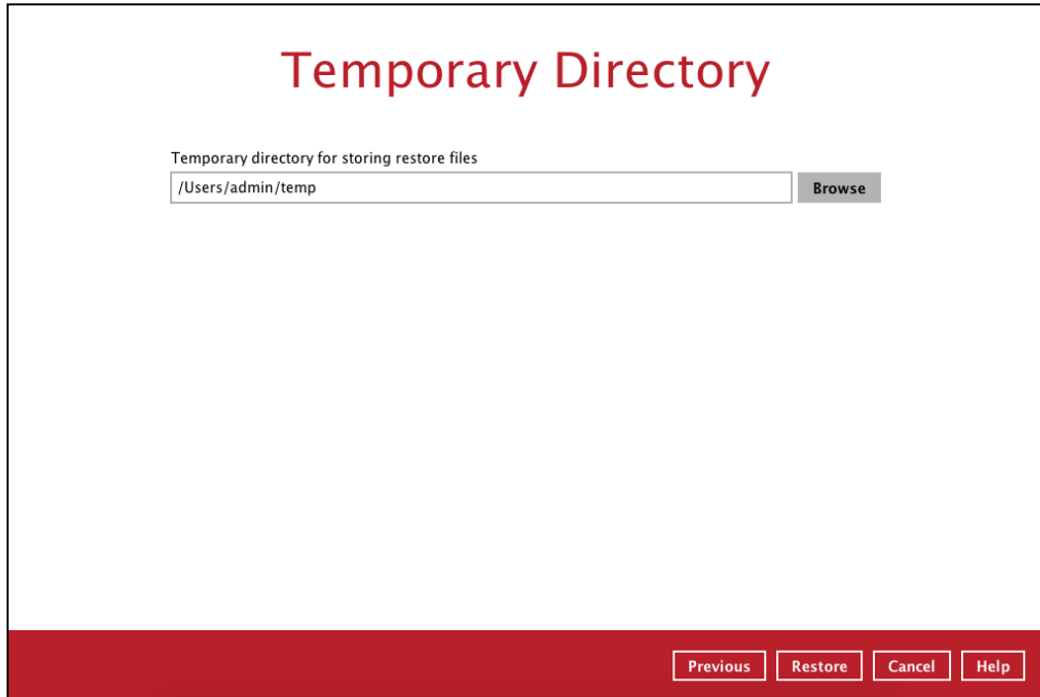

Click **Next** to proceed.

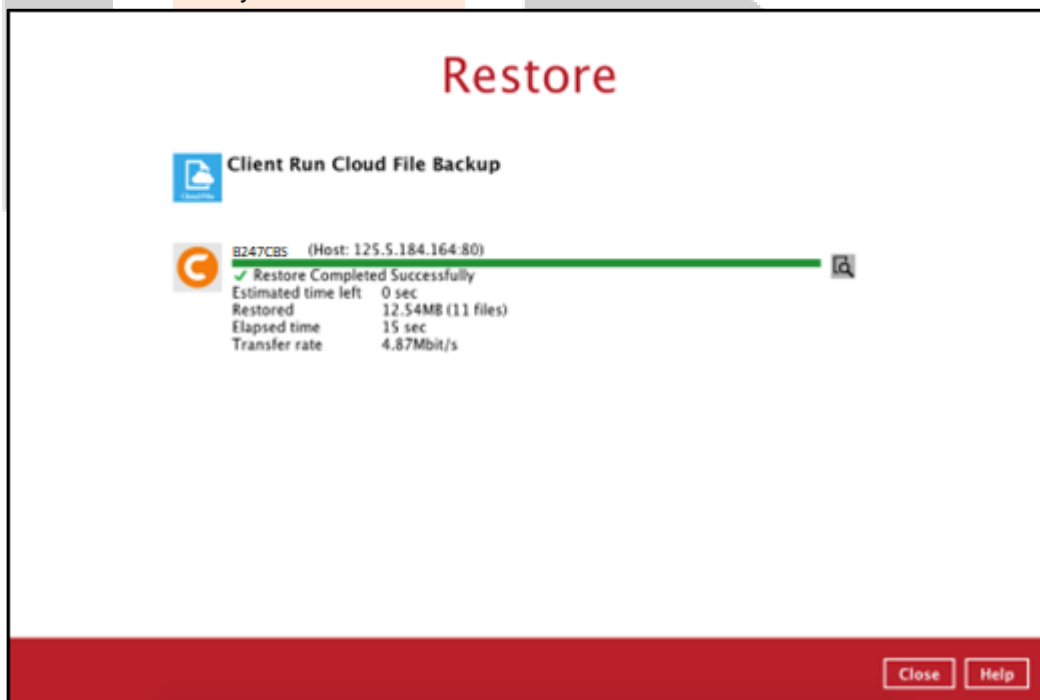

NOTE

Data can only be restored to the local computer or to the original cloud storage where the data was backed up from (i.e., same cloud storage provider and same account). Restoring backup data to a different cloud storage provider or different account is **NOT** possible.

6. Select the temporary directory for storing temporary files.

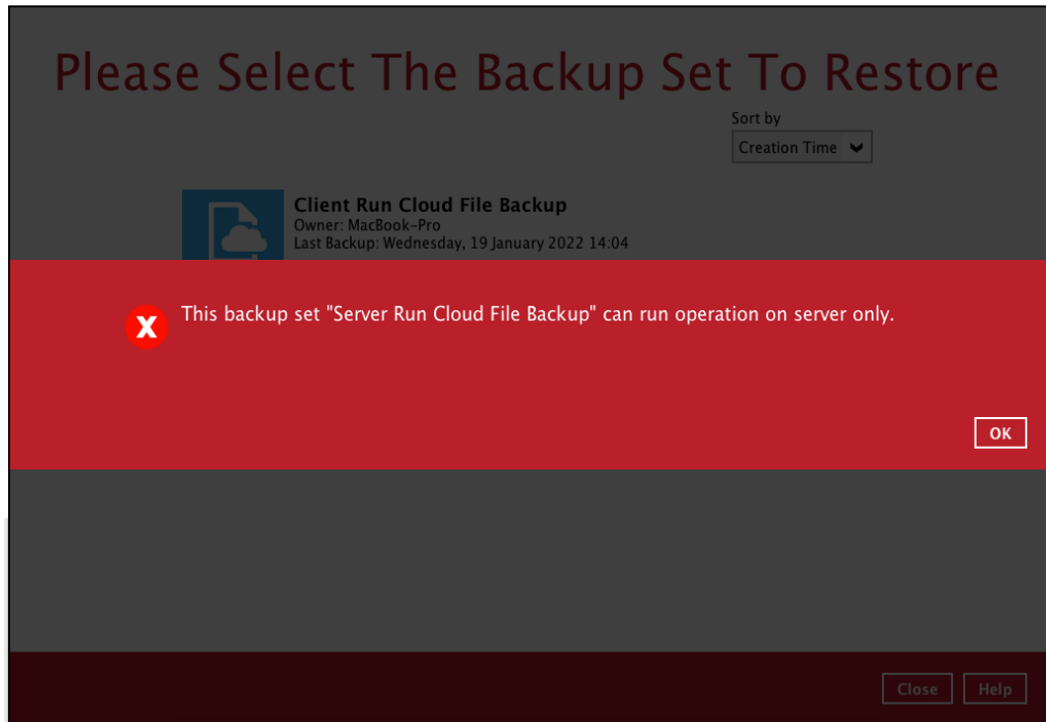

7. Click **Restore** to start the restoration. The following screen is displayed when the files are restored successfully.

IMPORTANT

Data of a **Run on Server** Cloud File backup set can only be restored via the B247CBS web console. The following error message will be displayed if you try to restore data of a **Run on Server** Cloud File backup set via the Backup247 Advanced Client (B247PRO) user interface.

6 Contacting Backup247

6.1 Technical Assistance

To contact Backup247 support representatives for technical assistance, visit our website <https://backup247.com.au/Support.php>

6.2 Documentation

Documentations for all Backup247 modules, user guide and QuickStart are available on our website. Alternatively, email us on support@backup247.com.au for technical demo.
